

National Severe Weather Warning Service

Chief Forecasters Assessment

A vigorous area of low pressure is expected to move quickly northeastwards across the UK later on Wednesday, clearing eastwards on Thursday. At present computer models are suggesting a variety of possible tracks for this system across the UK. Therefore there remains uncertainty regarding its exact track and hence the areas more likely to be affected by the worst of the winds. However, it looks as if gusts of 60-70 mph are likely with perhaps over 80 mph in exposed areas and that southwestern areas are most at risk.

Please monitor the website for possible updates to this alert.

The Met Office have issued a **Yellow Alert of Wind**

Valid from **12:00 on Wed, 12th Feb 2014** until **06:00 on Thu, 13th Feb 2014**

A vigorous area of low pressure is expected to move northeastwards across the UK later on Wednesday, clearing eastwards early on Thursday. This is likely to be accompanied by a swathe of gales across many parts of England and Wales which may be severe in places. The public should be aware of the the risk of disruption to transport and possibly also power supplies.
